Skills

Python
Django
FastAPI
Flask
RabbitMQ
Redis
MilvusDB
PostgreSQL
Linux
Git
Docker
Jira

Languages

Ukrainian	C1
Russian	C1
English	B2

Profile

I'm a Python backend developer with 4.5 years of commercial experience building web applications and service-oriented systems. I work across the spectrum, from architecture in large-scale Django project to lightweight standalone microservices, taking projects end-to-end by turning vague business requirements into clean, scalable, and maintainable code. My core stack includes Django, FastAPI, and Flask paired with PostgreSQL, alongside RabbitMQ and Redis for event-driven processing. Lately, my focus has extended to embedding AI/ML capabilities into business infrastructure to automate operations, enhance data analysis, and power data generation. I'm equally comfortable working solo or in a team, making strong connections with everyone I work alongside.

WORKING EXPERIENCE

Sintegrum

MARCH 2025 — PRESENT
MIDDLE PYTHON AI/ML DEVELOPER

- Designed and built AI-powered FastAPI microservices integrating local models (Whisper, Llama, HiggsTTS, OpenCV) for speech-to-text, text-to-speech, image processing and other tasks.
- Built an AI assistants service that plugs into multiple LLM providers (OpenAI, Gemini, local Llama 4), with configurable prompts and tools, multi-agent support, and a local vector DB for storage and retrieval.
- Developed a real-time SIP/Janus voice assistant using OpenAI, Ultravox and ElevenLabs APIs, fully configurable through prompts.
- Created a face-search microservice with InsightFace and the MilvusDB, enabling identity lookup by facial embeddings.

dZENcode

NOVEMBER 2023 — MARCH 2025
PYTHON DEVELOPER

- Worked as an independent developer, building and maintaining Django applications for the company's clients.
- Communicated directly with clients to gather requirements, translating business needs into technical tasks and delivering them end-to-end.
- Containerized applications with Docker and Docker Compose, deploying services to clients' VPS.
- Set up CI/CD pipelines to automate builds and deployments.
- Integrated payment providers into client applications.
- Connected the system to external reporting services for automated data exchange.

Sana Plus Group

OCTOBER 2022 — NOVEMBER 2023
PYTHON ENGINEER

- Fully built a call-analysis microservice using Whisper for speech-to-text transcription and processing.
- Developed a ML Q&A system for customer technical support.
- Created Telegram bots for company needs.
- Built services for data ingestion and processing, deployed on Cloud Run.
- Set up scheduled jobs to collect data and generate periodic reports with Cloud Run and BigQuery.

Limanet

MAY 2022 — AUGUST 2022
JUNIOR PYTHON ENGINEER

- Built a Django and MongoDB system for storing and managing optical equipment configurations.
- Developed a Telegram bot for clients to check their balance, submit requests, and leave feedback on technician visits.
- Implemented data parsing and synchronization between two systems.

EDUCATION

Master

International University
Faculty of Cybersecurity, Software Engineering and Computer Science, Odessa,
Ukraine

2026 — PRESENT

Bachelor

International University
Faculty of Cybersecurity, Software Engineering and Computer Science, Odessa,
Ukraine

2023 — 2026

Associate degree

Professional College of Communication and Informatization of the State
University of Intellectual Technologies and Communications
Odessa, Ukraine

2019 — 2023
